

Factsheet

Ingeklukt womens pad

20 cm

A comfortable women's pad is essential for the fun you experience when riding.

This is why we use the best pad our suppliers offer for all our cycling shorts.

ABOUT OUR WOMEN'S PAD

The top layer of the pad is made of 95% polyamid and 5% carbon.

Carbon absorbs moisture and regulates your body temperature optimally. Also, it stimulates your blood circulation and has anti-bacterial features.

The different elements of the pad vary in thickness between 3 & 7mm and its shape is specifically designed to perfectly adapt to the feminine body.

The elements with a thickness of 7mm have a density of 80g/m². The parts that are 3mm thick have a density of 120g/m².

The high density, composition and feminine design make sure that you will feel comfortable during hours and hours of riding your bike.

Do you experience a lot of saddle sore when riding your bike?
In this case we strongly recommend you to arrange a bike fitting.
